89th Regular Session, Agency Submission, Version 1
Automated Budget and Evaluation System of Texas (ABEST)

506 The University of Texas M.D. Anderson Cancer Center

The University of Texas MD Anderson Cancer Center was created by the Texas Legislature in 1941 as a component of The University of Texas System. MD Anderson is one of the nation's original three Comprehensive Cancer Centers designated by the National Cancer Act of 1971 and is one of 57 Comprehensive Cancer Centers today.

U.S. News & World Report's "America's Best Hospitals" survey ranked MD Anderson as the top hospital in the nation for cancer care for 2024-25. The institution has ranked as one of the top two hospitals for cancer care since the magazine began its annual survey in 1990.

MD Anderson's mission is to eliminate cancer in Texas, the nation and the world through outstanding programs that integrate patient care, research and prevention and through education for undergraduate, graduate students, trainees, professionals, employees and the public.

Magnitude of the Cancer Problem

Cancer is the second most common cause of death in the United States. While cancer strikes at any age, 88% of all cancers occur in people age 50 and older. Over 147,000 Texans are estimated to be newly diagnosed with cancer in 2024 and approximately 44,000 Texans are estimated to die of the disease this year.

According to the American Cancer Society, an estimated 18 million Americans are living with a history of surviving cancer. The five-year survival rate for all forms of cancer combined has risen to 69%, up from 49% in the 1970's, meaning more Americans are living with a history of cancer and require medical follow-up. Those not cured are living longer as a result of earlier detection and improved therapies, but they require more medical resources.

Institutional Strategy

In 2021, MD Anderson launched a pivotal, multi-year strategy aimed at making the greatest impact on humanity in the institution's work to end cancer. Developed with direct involvement from front-line cancer fighters and through ideas curated from faculty, MD Anderson's new Strategy is anchored in its mission and grounded in its unwavering commitment to our stakeholders.

The strategy aligns the institution and its resources around three strategic themes: Reach, Breakthroughs and Value. Coupled with a purposefully designed execution framework, the Strategy drives cancer care that is more accessible in the communities that MD Anderson serves, develops high-impact research that improves people's health, and both defines and delivers high-value oncology care. The strategic themes also support signature philanthropy priorities that are deliberately linked to MD Anderson's Strategy.

Each theme contains a series of underlying strategic decisions and actions grounded in the same aspirational principle: to make the greatest impact on humanity to finally end cancer. The aims of each theme along with brief summaries of our progress in certain strategic decisions are provided below:

Reach: Make it easier for the patients and communities we serve to access our expertise to ultimately prevent disease and improve health.

MD Anderson aims to grow the number of Texans served by broadening our physical reach throughout the Texas Medical Center and planned expansion to Austin. We have sustained our virtual reach to patients in and beyond Houston in a manner many have come to expect since the pandemic. From Fiscal Years 2021 through 2023, MD Anderson engaged in 446,000 virtual visits, which is 22% of our total visits for that period. We also have expanded our reach through national and global partnerships. After creating a single national partnership model, we added Ochsner Health and RUSH University System for Health to our Cancer Network Partners. As part of our

Administrator's Statement

Automated Budget and Evaluation System of Texas (ABEST)

506 The University of Texas M.D. Anderson Cancer Center

Global Oncology program, a collective approach to ending cancer in low- and middle-income countries, the institution collaborates with governments and mission-aligned organizations to advance cancer education, training, public policy and research initiatives. This year, we announced agreements with the International Atomic Energy Agency and the Pan American Health Organization, and we have more collaborations in progress.

Breakthroughs: Drive high-impact discovery research focused on unmet medical need and accelerate translation into meaningful improvements in health outcomes to become the No. 1 cancer research organization.

Decisions within our Breakthroughs theme include the acceleration and expansion of clinical trials and the building of a world-class data science program. OnCore, our clinical trial management system, was fully implemented in May 2023, leading to improved trial activation timelines and overall cost savings. In addition, we have restructured our Institutional Review Board, enhanced clinical trial availability in Houston-area locations, and explored platforms to match patients to trials. The launch of our Institute for Data Science in Oncology and the creation of five initial focus areas already is helping us learn from our data and patients to drive impactful change.

Value: Set new standards for high-touch, high-value cancer care.

Our teams continue to focus on driving high touch, high value care through the implementation of important initiatives such as goal concordant care. Through this effort, 90% of our Cancer Medicine providers have completed training to help facilitate empathic conversations with patients and their families and nearly 64% of patients complete advanced care planning by their third visit. Our Access Redesign efforts have enabled us to implement tools to increase visibility into the referral and intake process for patients, and now, nearly 85% of new patients are able to receive access to MD Anderson care within three months. In addition, we are implementing a comprehensive patient navigation program across the institution to improve the experience of patients and caregivers as well as providers and staff.

Importantly, MD Anderson is also taking a strategic, forward-looking effort to shape the future of nursing through our Nursing Transformation initiative. The Meyers Institute for Oncology Nursing will support and develop nurses throughout their careers by providing educational, professional and wellness-based resources tailored to cancer care nurses and nurse scientists. Finally, our collective pursuit toward becoming a high reliability organization has enabled us to maintain a five-star rating as well as the No.1 ranking in Patient Safety in Vizient's 2023 rankings.

MISSION OVERVIEW

Patient Care

Since 1944, more than 2 million patients have turned to MD Anderson for cancer care in the form of targeted therapy, surgery, chemotherapy, radiation therapy, immunotherapy or combinations of these and other treatments. MD Anderson pioneered the multidisciplinary approach to treating cancer, bringing together teams of experts across disciplines to collaborate on the best treatment plan for patients. MD Anderson experts focus solely on cancer and are renowned for treating all types, including rare or uncommon diseases.

In FY2023, more than 179,000 patients sought care at MD Anderson and over 37,000 of them were new patients. Over 9,600 patients participated in therapeutic clinical research exploring novel treatments, the largest such cancer program in the nation.

The institution is accredited by the Joint Commission, an organization that ensures patients receive the best and safest health care possible. MD Anderson is among a

Administrator's Statement

Automated Budget and Evaluation System of Texas (ABEST)

506 The University of Texas M.D. Anderson Cancer Center

select group of hospitals nationwide who have earned five consecutive Magnet Recognition Program® designations from the American Nurses Credentialing Center . This designation recognizes exceptional professional nursing staff and the ways their practice translates into excellent patient care and quality outcomes .

A significant challenge for MD Anderson is managing growth amid increasing patient demand . The institution must balance the number of patients with the resources available to care for them while accounting for the rising costs of health care . As with all healthcare institutions, MD Anderson faces strong pressures as reimbursements from state and federal programs decline, and commercial and managed care carriers negotiate coverage limits for certain services and payment rates . In FY 2023, MD Anderson provided more than \$319 million in uncompensated care to uninsured and underinsured patients .

The Legislature provides funding to support MD Anderson's primary mission of patient care . It established the Cancer Center Operations Formula designed to support the institution's growth in patient care the same way that the current Health-Related Institutions (HRI) Instruction and Operations (I&O) Formula supports student growth for HRI . Based on Texas cancer patients served each year, the maximum increase in the Operations Formula cannot exceed the average increase in the I&O Formula for all HRI . Sustaining this critical support which recognizes MD Anderson's unique mission is the institution's highest budget priority .

Research

Important scientific knowledge gained in the laboratory is rapidly translated into clinical care at MD Anderson . Our research program is considered one of the most productive efforts in the world aimed solely at cancer . In FY 2023, the institution invested approximately \$1.2 billion in research .

MD Anderson continues to be a leader among its peers in the number of grants awarded and total amount of grant funding from the National Cancer Institute . MD Anderson holds six National Cancer Institute Specialized Programs of Research Excellence (SPORE) grants and one joint SPORE grant in melanoma, gastrointestinal, brain, leukemia, lung, ovarian and hepatocellular cancers . A leader in accelerating progress and increasing access to novel agents for patients, MD Anderson ranks among the top institutions nationwide in revenue derived from IP-related agreements and corporate strategic research alliances . MD Anderson boasts one of the largest and most effective clinical trials programs in the nation, which gives our oncologists years of experience with cancer treatments before the Food and Drug Administration approves them .

The Institute for Applied Cancer Science (IACS) is committed to apply our understanding of mechanisms driving tumor development and maintenance into the development of impactful small-molecule cancer drugs for our patients in need . IACS is part of MD Anderson's Therapeutics Discovery division, a unique group of clinicians, researchers and drug development experts working collaboratively to develop the next generation of targeted, immune- and cell-based therapies . Embedded within the nation's leading cancer center, the Therapeutics Discovery team leverages innovative academic science and clinical excellence to work with the bench at the bedside . Using this approach, IACS works closely with the Moon Shots® and platforms to advance new targeted therapies to patients quickly, safely and effectively .

The Sheikh Khalifa Bin Zayed Al Nahyan Institute for Personalized Cancer Therapy is an international center of clinical excellence focusing on using the latest advances in genetic information to develop safer, more effective treatments for patients on a case-by-case basis, commonly called precision medicine .

Significant Research Accomplishments

Each year, about 187,000 Americans are diagnosed with one of the three main types of blood cancers: leukemia, lymphoma and myeloma, and in each of these diseases our researchers are making exceptional strides . As the examples below show, we often are able to translate our findings into improvements in patient outcomes .

Administrator's Statement

89th Regular Session, Agency Submission, Version 1
Automated Budget and Evaluation System of Texas (ABEST)

506 The University of Texas M.D. Anderson Cancer Center

Non-Hodgkin lymphoma (NHL) is one of the most common cancers in the United States and chronic lymphocytic leukemia (CLL) is the most common type of leukemia in adults. Treating cancer with living engineered cells is a revolutionary approach leading to robust and durable responses. Some of our experts have been focused on using cord blood-derived chimeric antigen receptor (CAR) natural killer (NK)-cell therapy. A 2024 study published in Nature Medicine showed that participants with several variants of these cancers responded to the CAR-NK therapy: complete responses one year after treatment were seen in 83% of patients with low grade-NHL, 50% of patients with CLL and 29% of patients with diffuse large B-cell lymphoma.

Another team is making strides for subset of patients with acute leukemias with specific genetic characteristics (KMT2A rearrangements – which are difficult to treat – or NPM1 mutations, which are the most common genetic alternation in acute myeloid leukemia). These patients have no specifically approved targeted therapies. Our scientists studied the oral medication revememib, and in 2023 they reported significant activity in the journal Nature with an overall response rate in 53% of participants. Global confirmatory trials are underway.

Vaccines are one of the emerging areas for cancer prevention and treatment. MD Anderson is on the front lines of many different vaccine efforts, including for those at high risk of having their pancreatic or colorectal cancers return. These cancers are frequently driven by the Ras-oncogene making them hard to treat, A 2024 study published in Nature Medicine evaluated response to a lymph node-targeted cancer vaccine called ELI-002 in patients who had pancreatic and colorectal cancers with KRAS mutations. The study showed 84% of participants responded.

Moon Shots Program®

In 2012, MD Anderson embarked on a comprehensive effort to accelerate the pace of converting scientific discoveries into clinical advances and significantly reduce cancer-related mortality and suffering over the next decade. Cancer science has reached a point of conceptual and technological maturity, positioning the field to accelerate and systemize this effort. This program brings together teams of researchers and clinicians to mount comprehensive attacks on major cancers. They work as part of thirteen disease-focused initiatives and ten platforms to support the program's team-science approach and accelerate the translation of data and discoveries for patients' benefit. The program has received \$501 million in private philanthropic commitments and has attracted new grants and contracts in excess of \$777 million. The goal is for all cancers to become Moon Shot efforts.

The James P. Allison Institute & The Institute for Data Science in Oncology

In 2022, MD Anderson launched the James P. Allison Institute, a visionary research and innovation hub within MD Anderson designed to foster groundbreaking science, to develop new treatments and to bring the benefits of immunotherapy to all patients.

The Allison Institute will advance exceptional discovery, translational and clinical research to integrate immunobiology across disciplines and unlock the full potential of science and medicine for human health. The institute builds upon the legacy of its namesake, James P. Allison, Ph.D., who was awarded the 2018 Nobel Prize in Physiology or Medicine for his fundamental discoveries in T cell biology and his invention of ipilimumab, the first immune checkpoint inhibitor to treat cancer.

The Institute for Data Science in Oncology works to unlock the power of data and enable impactful change through data science by using intelligent systems to improve cancer patient safety and quality; streamlining operations to enable continuous monitoring and modeling of operational performance to enhance patient access and scheduling; and predicting outcomes for patients by finding optimal combinations of current and emerging treatments.

Administrator's Statement

89th Regular Session, Agency Submission, Version 1
Automated Budget and Evaluation System of Texas (ABEST)

506 The University of Texas M.D. Anderson Cancer Center

The Institute for Cell Therapy Discovery and Innovation

The development of a cell therapy product is complex and requires integration of multiple disciplines with a common purpose. At MD Anderson, we have proven capability for leadership in the field of cell therapy by developing novel therapies such as genetically modified immune cells such as natural killer (NK) cells and virus specific cytotoxic T-lymphocytes (CTLs).

In late 2024, MD Anderson will launch the Institute for Cell Therapy Discovery and Innovation to emphasize its support and dedication to advancing innovative cell therapies for patients with cancer. We will also strive to broaden the scope of cell therapies beyond cancer, to address debilitating conditions such as autoimmune diseases and infections. Leveraging our extensive understanding in T cell and NK cell biology, cancer immunology and cancer genomics, alongside our expertise in clinical translation, we have assembled a world-class team with significant experience in research, development and manufacturing of cell and gene therapies for clinical application.

Education

In FY 2023, over 5,700 trainees took part in educational programs, including physicians, scientists, nurses and many health professionals. MD Anderson offers degrees in ten bachelor's programs and two master's programs in allied health disciplines in its School of Health Professions, educating 386 students. Notably, 90% of surveyed graduates stayed to work in Texas hospitals and diagnostic labs. This is a critical need area as the demand for allied health professionals increases.

While MD Anderson is proud to fulfill its education mission, the institution must rely on institutionally generated funds and grants to cover most of the costs of its education programs because of the small number of students that qualify for support under the HRI formulas.

More than 1,800 clinical residents and fellows come to MD Anderson each year to receive specialized training in the investigation and treatment of cancer. Over 470 graduate students are working on advanced degrees at the Graduate School of Biomedical Sciences, which MD Anderson operates jointly with UT Health. In addition, over 1,000 research trainees are taught in MD Anderson's laboratories. Accreditation by the Commission on Colleges of the Southern Association of Colleges and Schools affirms MD Anderson as a major teaching institution, recognizing the faculty for their influential role in educating graduate and undergraduate students.

Prevention

MD Anderson continues to set the standard in cancer prevention research and the translation of new knowledge into innovative, multidisciplinary care for patients, survivors and people at average or elevated risk of developing cancer. The Division of Cancer Prevention and Population Sciences is dedicated to eradicating cancer through pioneering research in the roles that biologic, genetic, environmental, behavioral and social factors play in cancer development and investigations of behavioral, surgical, medical and social interventions to prevent or reduce cancer risk.

In the context of the Moon Shots® effort, the institution is increasingly focused on cancer prevention and control programs in policy, education (public and professional) and services in the community through the Cancer Prevention and Control Platform. The Platform develops and implements evidence-based interventions in cancer prevention, screening, early detection and survivorship, to achieve a measurable and lasting reduction in the cancer burden. A significant focus is the impact of tobacco-related illnesses. The use of tobacco is one of the greatest public health menaces of our time, driving approximately 30% of all cancer deaths in the United States.

Administrator's Statement

10/8/2024 8:38:04AM

Automated Budget and Evaluation System of Texas (ABEST)

506 The University of Texas M.D. Anderson Cancer Center

This year, almost 500,000 Americans and 8 million people worldwide will die from tobacco-related illnesses.

Motivated by the daily suffering that we witness by patients and their families, a cross-functional team delivered a comprehensive program, called EndTobacco®, that recommends strategic and tactical actions in the areas of policy, education and community-based services that MD Anderson can take to address the tobacco burden within the institution and beyond in organizations and communities across the state, the nation, and the world. EndTobacco® is founded on best practices in tobacco control as established by the Centers for Disease Control and Prevention and the World Health Organization.

Human Resources and Facilities

Employees number over 26,000, including more than 1,900 faculty. MD Anderson was ranked among Forbes' list of “America’s Best Large Employers for 2024” and as one of the nation’s best places to work by Glassdoor.com. The institution was also recognized in the Forbes 2024 ranking of “the Best Employers for Women.” The institution was also recognized in 2024 as one of the “Healthiest Employers in Texas” in recognition for our steadfast commitment to comprehensive wellness initiatives that support our employees’ personal and professional wellness as well as programs that contribute to a healthier workplace environment. Additionally, MD Anderson was recognized by the American Heart Association at the Gold level for Healthy Workplace Culture.

MD Anderson is the largest freestanding cancer center in the world. Facilities in the Texas Medical Center (TMC) cover more than 16 million square feet and feature the latest equipment and infrastructure to support growing needs in outpatient and inpatient care, research, prevention and education.

The Keeling Center for Comparative Medicine and Research, located on 375 acres near the City of Bastrop, houses chimpanzees, rhesus monkeys, sheep, cattle, swine, chickens and rodents, and has an international reputation for innovation in breeding and managing many species vital to biomedical research at MD Anderson and all over the U.S. More than 150 personnel, including veterinarians, animal handlers, research technicians and administrative staff conduct research in cancer, HIV, hepatitis, obesity and vaccine development. The campus has earned an international reputation for laboratory animal science and comparative medicine as well as housing, care and re-socializing of chimpanzees.

The TMC3 initiative will enhance collaboration, innovation, translation and commercialization in the Texas Medical Center. The collaborative and commercialization life sciences potential of Houston is underleveraged when compared to smaller cities with fewer institutions and less philanthropic and National Institutes of Health funding. Founding institutions are UT Health, UT MD Anderson Cancer Center, Texas A&M University System and the Texas Medical Center. The recently completed TMC3 Collaborative Building houses MD Anderson and the other academic health care partners, creating a 43,000-square-foot joint research lab comprised of both lab and office/co-working space. The building includes an additional 14,000-square-foot space for strategic initiatives such as the Institute for Data Science in Oncology and the James P. Allison Institute.

Development of the translational research campus in the TMC Mid-Campus and on UT System Research Park is underway, including: four research buildings; collaborative space; shared core labs, office, meeting/conference/education space; building sites for industry; and parking. UT System institutions are building research facilities located in the UT Research Park, and focused on leveraging 2,000 investigators, staff and industry collaborators present in the UT Research Park, with a bridge connecting the South Campus to the TMC Mid-campus.

In 2021, MD Anderson received \$70 million in Capital Construction Assistance Projects (CCAP) revenue bond support for its dedicated research facility in the innovation

hub. If the state considers CCAPs in the 89th Texas Legislature, we respectfully request consideration of funding to support the construction of a Bioscience Research Facility. A key to developing South Campus as a central hub for research development and innovation, this facility will support work in nearby South Campus Research Building 5 while also supporting our plan to vacate aging research facilities on North Campus to make space for a new inpatient tower. This facility will house a 26,500-cage vivarium—the first step in a long-range plan to consolidate and centralize vivarium space — and create shell space for future projects. MD Anderson has developed local care sites as well as national and international partnerships to deliver its high-quality cancer care outside of the main campus. Houston Area Locations are in communities throughout the greater Houston area.

SIGNIFICANT ACHIEVEMENTS

MD Anderson’s faculty is one of the most esteemed in the nation, including one Nobel Laureate, nine members of the National Academy of Medicine, eight National Academy of Sciences members, six American Academy of Arts and Sciences members and 50 American Association for the Advancement of Science fellows, 15 Association of American Physician members and 33 American Society of Clinical Investigation members.

The Historically Underutilized Business (HUB) and Federal Small Business Program in FY2023 achieved a significant milestone, surpassing \$100MM HUB expenditure for the second consecutive year. This is a testament to our unwavering commitment to the HUB Community. In November 2023, MD Anderson was awarded Corporation of the Year by the Houston Minority Supplier Diversity Council, a recognition that validates our commitment to growing Minority Business Enterprises. Also, in June 2024, MDACC was awarded the Supplier Diversity Champion Award by Subcontractor USA for our Outstanding Commitment to Diversity in Business. Also, the HUB Program Associate Director was awarded the R.A. Wiltz Minority Business Advocate of the Year by the Greater Houston Business Procurement Forum, a recognition for advocating for minorities, women, and service-disabled businesses.

STATE SUPPORT

General Revenue

Automated Budget and Evaluation System of Texas (ABEST)

506 The University of Texas M.D. Anderson Cancer Center

The GR appropriation, over \$ 220 million in FY2024, accounted for 3.8% of the total operating budgeted revenues prior to the COVID-19 pandemic, providing critical support for patient care, education, research and infrastructure. The FY 2026-27 request is at 100% of base FY 2024-25 funding with the exception of debt service. MD Anderson maximizes its leveraging of state funding FY 2023, the institution generated \$31.1 additional dollars for cancer patient care, education and research for each \$1 of GR; and \$47.70 in research support for every \$1 of GR from the state for research, illustrating a sound investment for Texas.

Tobacco Settlement Funds

The Legislature established a permanent \$100 million endowment for MD Anderson in 1999. The fund provided \$7.2 million in FY 2024 for tobacco-related research programs. A separate endowment for all HRIs provided \$2.7 million for these purposes. The following programs received settlement funds in FY 2024: \$6.4 million for Cancer Prevention initiatives including: Tobacco Treatment Program; Tobacco Research and Treatment Program; Tobacco Research and Treatment training program; EndTobacco® Program; and Cancer Prevention & Control Platform. It also provides \$1.0 million for Breast Medical Oncology, Molecular Carcinogenesis & Epigenetics, Genomic Medicine and Imaging Physics; and \$2.5 million for Research Equipment.

Required Statement on Criminal History

MD Anderson's policy is to obtain state criminal history information on non-faculty finalists considered for appointment to a security sensitive position and national data on faculty candidates, as allowed by Government Code Sec. 411.094 and Education Code Sec. 51.215. All positions are designated as security sensitive. Criminal background information may not be released or disclosed to any unauthorized person, except on court order.

EXCEPTIONAL ITEMS

1) Institute for Cell Therapy Discovery and Innovation

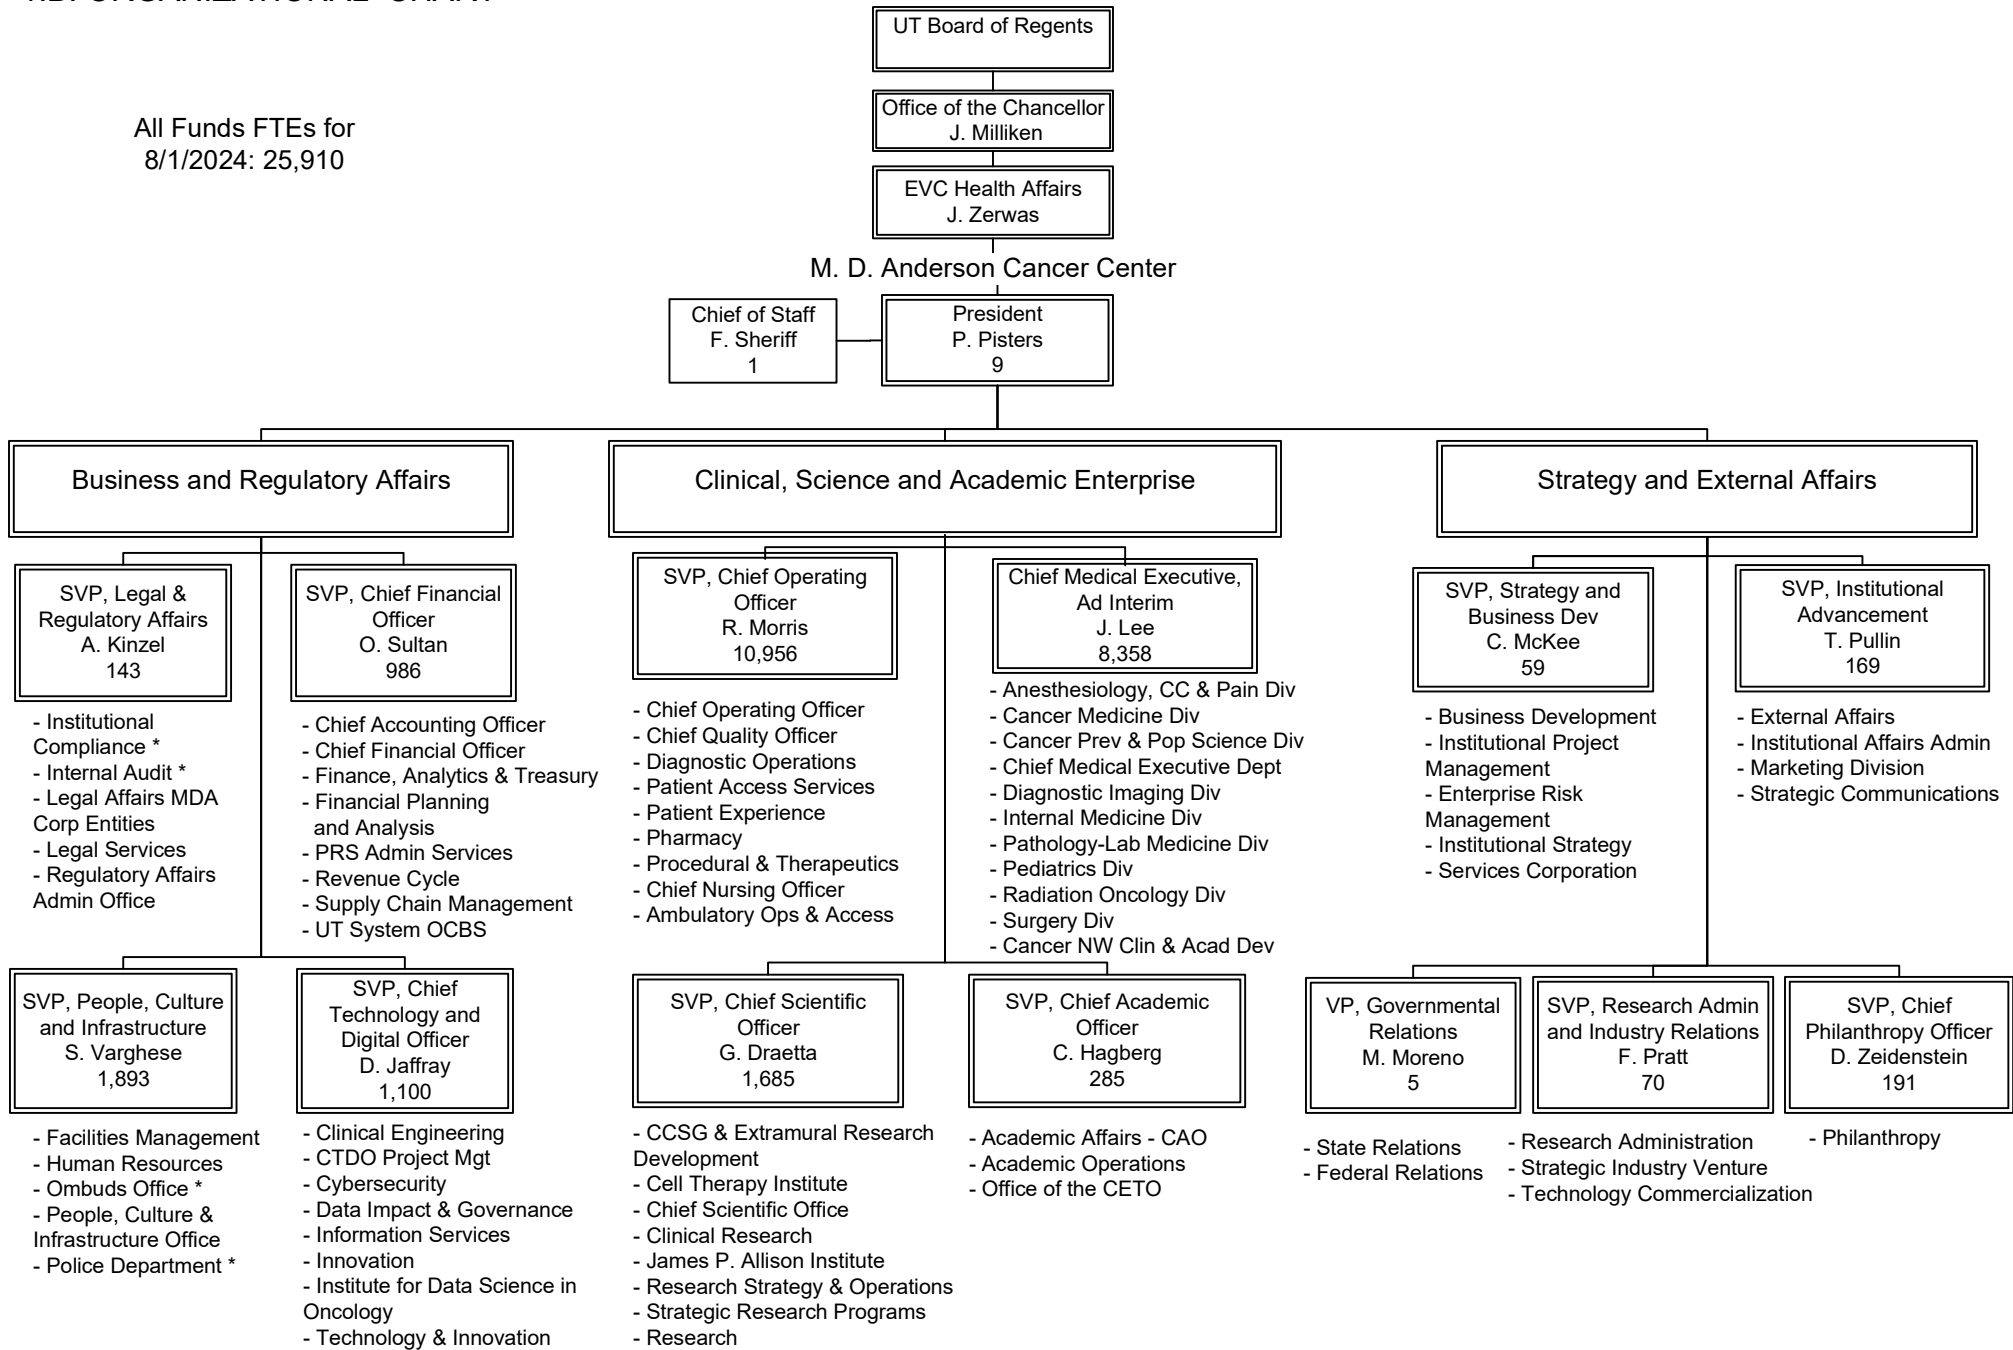

The Institute for Cell Therapy Discovery and Innovation aims to harness its expertise in T cell, B cell and NK cell engineering, along with our profound knowledge of cell therapy research and platforms being developed around the world, to generate immune cell products with a focus on expanding our capabilities beyond cord blood-derived NK cells. Our aim is to deliver targeted cell therapies to patients with cancer that are safe and highly effective. We will accomplish this by capitalizing on our existing platforms to develop novel cell therapies to address the unique challenges presented by different cancer types, thus providing patient benefit and maintaining our global leadership in cell therapy.

This \$30 million, one-time request would provide early funding for research and development, clinical trials and cell therapy manufacturing for potentially much more affordable and accessible cell therapies for patients.

------	-------------	----------	----------	----------	------------------------	------------------------

The Instruction and Operations Formula provides funding for faculty salaries, departmental operating expense, library, instructional administration, student services and institutional support. The formula for this strategy is based on weighted allied health student full time equivalent. The rate per weighted student headcount or full-time equivalent is established by the Legislature each biennium.

EXTERNAL/INTERNAL FACTORS IMPACTING STRATEGY:

The clinical experience offered by the School of Health Professions prepares students to enter the job market with a wide range of skills and knowledge, so that they can compete for highly sought-after jobs within health care organizations.

STRATEGY DESCRIPTION AND JUSTIFICATION:

The Graduate Medical Education (GME) formula allocates funding based on the number of medical residents in accredited programs. These funds shall be used to increase the number of resident slots in the State of Texas as well as faculty costs relating to GME.

EXTERNAL/INTERNAL FACTORS IMPACTING STRATEGY:

Successful GME programs require adequate resources to retain and recruit talented faculty and support staff, provide state-of-the-art facilities and maintain quality training programs. MDACC is committed to enhancing and identifying new sources of funding for these critical elements of its instruction mission.

------	-------------	----------	----------	----------	---------	---------

The Cancer Center Operations Formula provides funding for faculty salaries, departmental operating expense, and institutional support. The formula for this strategy is based on the total number of Texas cancer patients served at The University of Texas M. D. Anderson Cancer Center. The rate per Texas cancer patient served is established by the Legislature each biennium. The amount of growth in total funding from one biennium to another may not exceed the average growth in funding for Health Related Institutions in the Instruction and Operations formula for the current biennium.

EXTERNAL/INTERNAL FACTORS IMPACTING STRATEGY:

Efficient patient care programs require adequate resources to recruit and retain talented faculty and support staff and provide state-of-the-art facilities.

EXPLANATION OF BIENNIAL CHANGE (includes Rider amounts):

FULL TIME EQUIVALENT POSITIONS:		39.2	41.6	41.7	41.7	41.7

STRATEGY DESCRIPTION AND JUSTIFICATION:

The Research Enhancement formula allocates a base amount of \$1,412,500 to each institution in addition to a percentage of the total research expenditures as reported to the Texas Higher Education Coordinating Board. The percent of additional funding above the base is established by the Legislature each biennium. These funds are used to support the research activities of the institution.

(1) - Formula funded strategies are not requested in 2026-27 because amounts are not determined by institutions.

506 The University of Texas M.D. Anderson Cancer Center

The Capital Construction Assistance Projects (CCAP) Revenue Bond strategy is for the debt service on two CCAP bond projects.

The first project was funding of \$70,000,000 towards the Zayed building for personalized cancer care to accommodate the expanding research mission of M.D. Anderson and related programs focused on developing and advancing the most innovative therapeutics, diagnostics, early detection and prevention techniques to combat cancer.

The second project was funding of \$69,897,111 for construction of a life science research, innovation and discovery initiative facility. This new research building is a significant component of the TMC3 life science campus including collaboration of academia, medicine, and life science industry partners.

The FY 2026 and FY 2027 debt service for outstanding CCAP revenue bonds has been requested based on actual CCAP debt service requirements for issued bonds.

Funding currently supports the Cord Blood Bank and Good Manufacturing Laboratory (GMP) with the development and management of critical research protocols for cord blood transplantation and other cellular therapies, including rapid and exciting developments of chimeric antigen receptor (CAR) T cell therapy and CAR natural killer (NK) cell treatments for hematologic and solid tumors. These novel therapeutic approaches harness the body’s own immune system to effectively fight cancers by killing abnormal cells. Cord blood provides a source of stem cells for transplant for minority patients who often have no registered donors. MD Anderson serves an unmet need as 75% of the cord blood units in the bank are of Hispanic, Black or Asian origin and the institution finds units for patients that otherwise would not have donors.

STRATEGY DESCRIPTION AND JUSTIFICATION:

The Breast Cancer Research Program strategy funds programmatic research for Inflammatory Breast Cancer (IBC), a rare and often lethal type of breast cancer, which represents 10% of breast cancer mortality. Our mission is to eliminate IBC from Texas, USA, and the world. We want Texas to continue to be recognized as the preeminent worldwide leader of fighting this rare but deadly disease.

Since it was established in 2007, the "Morgan Welch Inflammatory Breast Cancer (IBC) Research Program and Clinic" at MD Anderson Cancer Center continues to lead the way in diagnosis, treatment, translational research, collaboration, and community education for this aggressive disease.

----------------------------	--	---------------------------------------	------------------------------	-----------------------

Current Rider Number	Page Number in 2024-25 GAA	Proposed Rider Language
5	III-212	<p>5. Estimated Appropriation and Unexpended Balance. Included in the amounts appropriated above are: (1) estimated appropriations of amounts available for distribution or investment returns out of the Permanent Endowment Fund for The University of Texas M.D. Anderson Cancer Center No. 812 and (2) estimated appropriations of the institution's estimated allocation of amounts available for distribution out of the Permanent Health Fund for Higher Education No.810.</p> <p>a. Amounts available for distribution or investment returns in excess of the amounts estimated above are also appropriated to the institution. In the event that amounts available for distribution or investment returns are less than the amounts estimated above, this Act may not be construed as appropriating funds to make-up the difference.</p> <p>b. All balances of estimated appropriations from the Permanent Endowment Fund for The University of Texas M.D. Anderson Cancer Center No. 812 and of the institution's allocation from the amounts available for distribution out of the Permanent Health Fund for Higher Education No. 810, except for any General Revenue, at the close of the fiscal year ending August 31, 2023 2025, and the income to said fund during the fiscal years beginning September 1, 2023 2025, are hereby appropriated. Any unexpended appropriations made above as of August 31, 2024 2026, are hereby appropriated to the institution for the same purposes for fiscal year 2025 2027.</p> <p><i>M.D. Anderson requests that the dates in the rider be updated for the next biennium.</i></p>
8	III-213	<p>8. Rare and Aggressive Breast Cancer Research Program. Of the amounts appropriated above in Strategy D.1.2, Breast Cancer Research Program, \$2,000,000 in fiscal year 2024 2026 and \$2,000,000 in fiscal year 2025 2027 in General Revenue is for the rare and aggressive breast cancer research program. Its efforts will contribute to improving the diagnostics in patients with breast cancer.</p> <p><i>M.D. Anderson requests that the dates in the rider be updated for the next biennium.</i></p>

1	General Revenue Fund	15,000,000	15,000,000
TOTAL, METHOD OF FINANCING		\$15,000,000	\$15,000,000

DESCRIPTION / JUSTIFICATION:

The Institute for Cell Therapy Discovery and Innovation at MD Anderson is dedicated to advancing innovative cell therapies for patients with cancer.

Cell therapy is a unique form of immunotherapy which bolsters the body's immune system to attack cancer cells. MD Anderson has developed a novel form of the treatment with fewer side effects and the capability to produce "off-the-shelf" products, increasing accessibility and reducing the costs of treatment. Our goal is to expand our capabilities beyond cord blood-derived NK cells, to investigate induced pluripotent stem cells (iPSCs), cells that are reprogrammed from cord blood which is derived from the umbilical cord upon labor and deliver, as a new source for readily available NK cells and other immune cells, including T cells, B cells and macrophages. Our aim is to deliver targeted cell therapies to patients with cancer that are safe and highly effective. We will accomplish this by leveraging our existing platform to develop novel cell therapies to address the unique challenges presented by different cancer types, thus providing patient benefit and maintaining our global leadership in cell therapy.

EXTERNAL/INTERNAL FACTORS:

Our approach is grounded in fundamental discoveries, which inform our preclinical and translational efforts. To date, our focus has been on the early clinical development of cell therapies with a focus on Phase 1 and early Phase 2 clinical trials. Moving forward, the institute will advance promising cell therapies from these early phase studies to broader multi-center trials, leveraging the MD Anderson network to increase accessibility. Our goal is to conduct registrational studies that could lead to FDA approval and guide the direction of product development, thereby increasing the value of our cell therapy assets. Our collaboration with MD Anderson's networks is also a means to bring clinical trials to underserved communities.

4.A. Exceptional Item Request Schedule
89th Regular Session, Agency Submission, Version 1
Automated Budget and Evaluation System of Texas (ABEST)

DATE: **10/8/2024**
TIME: **8:39:21AM**

Agency code: **506**

Agency name: **The University of Texas M.D. Anderson Cancer Center**

CODE	DESCRIPTION	Excp 2026	Excp 2027
-------------	--------------------	------------------	------------------

In addition, the Institute will serve as a hub to integrate departments that work on cellular therapies. This integration is not limited to clinical trials and will extend to helping faculty bring their innovative pre-clinical concepts to clinical application.

Additional information for this program is available in Schedule 9, Non formula support.

METHOD OF FINANCING:

1	General Revenue Fund	8,720,000	8,720,000
TOTAL, METHOD OF FINANCING		8,720,000	8,720,000

DESCRIPTION / JUSTIFICATION:

The Biosciences Research Facility (BRF) will advance research innovations by consolidating vivarium operations into a state-of-the-art facility on the South Campus. It represents a significant step towards the Master Facilities Framework goal of centralizing approximately 85% of UT MD Anderson's research operations on the South Campus to improve efficiency and facilitate collaboration to drive breakthroughs.

EXTERNAL/INTERNAL FACTORS:

The scope of the project includes the design and construction of a new three-floor building with a partial interstitial (space for mechanical systems) level above Floor 2 and a two-level mechanical penthouse and comprising approximately 269,500 building gross square feet (BGSF) with Floors 1 and 2 being finished-out and Floor 3 (approximately 78,000 BGSF) being left in a shelled condition, to be finished out under a future, separate project. The finish out of Floors 1 and 2 will provide space for approximately 26,500 cages and associated procedure and support rooms as well as limited imaging capabilities.

B. Assessment of Attainment of HUB Procurement Goals

Attainment:

FY22: The agency exceeded our prediction goals in ST and CC category, the agency fell below in BC, PS, and OS. FY23: The agency below in BC, ST, PS, OS and CC category goals.

Applicability:

The "Heavy Construction" category was not applicable to agency operations in either FY2022 or FY2023.

Factors Affecting Attainment:

Extensive efforts were made in FY22 & FY23 to grow the capacity of HUBs: 1) Leadership met with 11 general construction contractors to discuss their commitment to support and encourage subcontracting opportunities to HUB firms, 2.) MDA onboarded three HUB suppliers in lab supplies, computer leasing and maintenance, repair and operations suppliers, 3) sponsored a mentor-protége relationship with an electrical HUB firm, and created our first six-week HUB subcontractor training program. These efforts reflected our HUB expenditure to surpass \$100MM for two consecutive years. Specialized pharmaceutical expenditures of around 46% limit HUB availability, adversely impacting the agency's ability to meet HUB objectives. As a dedicated cancer research and patient care center poses challenges to achieving HUB objectives. Purchases are restricted to clinical and research applications with limited (non-HUB) manufacturers or distributors. Many purchases are made through group purchasing organizations to maximize the value of the funds entrusted to the agency. Specific areas of impact include specialized medical diagnostic equipment, pharmaceuticals, Reagents, and professional health services.

Agency Code: 506 Agency: The University of Texas M.D. Anderson Cancer Center

C. Good-Faith Efforts to Increase HUB Participation

Outreach Efforts and Mentor-Protégé Programs:

MDACC made extensive efforts in FY22 and FY23 to educate and prepare HUB firms more than ever to compete for projects. Executive Leadership met with (eleven) 11 General Construction Contractors to discuss their commitment to support and encourage subcontracting opportunities to HUB firms. We MDACC leveraged the Job Order Contracting (JOC) process to ensure Prime Contractors meet their HUB commitments. MDACC hosted and created the first-ever comprehensive six-week HUB Subcontractor Training Program. The first class of graduates included 26 HUB construction contractors. Also, the institution hosted the first-ever Construction Business Matchmaking event. MDACC presented and/or attended 25 community events in FY22 and FY23. Also, MD Anderson sponsored a mentor-protégé relationship with an electrical HUB firm and a Prime Contractor. We hosted several events on "How to do Business with MD Anderson" to educate and prepare HUB firms to bid on MD Anderson projects.

HUB Program Staffing:

The program has an Associate Director and a senior HUB Coordinator dedicated to increasing HUB participation. The Associate Director's primary activities are to provide oversight of the HUB department, Collaborate with MD Anderson Operational Areas, Manage and Report HUB program Activities, and represent MD Anderson in professional and advocacy organizations. The Sr. HUB Coordinator reviews expenditure data for the HUB report, assists in managing the mentor-protege program, conducts in-house HUB training, and prepares the report for management monthly, along with meeting with HUB firms and providing any information on How to do Business with MD Anderson.

Current and Future Good-Faith Efforts:

MD Anderson continues to conduct a positive and proactive HUB outreach, solicitation, and development program designed to create opportunities and promote HUB participation and utilization in all its procurement processes. Normal distribution of the current bid list to advocacy groups, including Houston Minority Supplier Development Council, Women's Business Enterprise Alliance, Houston Minority Business Administration, and local trade centers for dissemination to their memberships to increase HUB bid participation. Active and regular participants in virtual and in-person HUB marketing and development events, including EXPOs and networking conferences. HUB team participates in prime contractor business reviews and short-list interviews ongoing to increase HUB participation. MD Anderson commits to a good faith effort to increase purchases from, and contract awards to, HUB firms consistent with the state's goals for HUB participation and overall economic development. Opportunities Forecasts are assembled and distributed quarterly to local advocacy groups for distribution to their membership and are provided at external networking events.

Project Start Date: 09/30/2024	Project Completion Date: 03/30/2028			
Gross Square Feet: 269,500	Net Assignable Square Feet in Project 159,000			

Project Description

The Biosciences Research Facility (BRF) will advance research innovations by consolidating vivarium operations into a state-of-the-art facility on the South Campus. It represents a significant step towards the Master Facilities Framework goal of centralizing approximately 85% of UT MD Anderson's research operations on the South Campus to improve efficiency and facilitate collaboration to drive breakthroughs.

The scope of the project includes the design and construction of a new three-floor building with a partial interstitial level above Floor 2 and a two-level mechanical penthouse and comprising approximately 269,500 building gross square feet (BGSF) with Floors 1 and 2 being finished-out and Floor 3 (approximately 78,000 BGSF) being left in a shelled condition, to be finished out under a future, separate project. The finish out of Floors 1 and 2 will provide space for approximately 26,500 cages and associated procedure and support rooms as well as limited imaging capabilities.

Cell Therapy Institute

(1) Year Non-Formula Support Item First Funded:	2026
Year Non-Formula Support Item Established:	2026
Original Appropriation:	\$30,000,000

(2) Mission:

The Institute for Cell Therapy Discovery and Innovation at MD Anderson is dedicated to advancing innovative cell therapies for patients with cancer.

Cell therapy is a unique form of immunotherapy which bolsters the body's immune system to attack cancer cells. MD Anderson has developed a novel form of the treatment with fewer side effects and the capability to produce "off-the-shelf" products, increasing accessibility and reducing the costs of treatment. Our goal is to expand our capabilities beyond cord blood-derived NK cells, to investigate induced pluripotent stem cells (iPSCs), cells that are reprogrammed from cord blood which is derived from the umbilical cord upon labor and deliver, as a new source for readily available NK cells and other immune cells, including T cells, B cells and macrophages. Our aim is to deliver targeted cell therapies to patients with cancer that are safe and highly effective. We will accomplish this by leveraging our existing platform to develop novel cell therapies to address the unique challenges presented by different cancer types, thus providing patient benefit and maintaining our global leadership in cell therapy.

(3) (a) Major Accomplishments to Date:

The main focus of the Institute for Cell Therapy Discovery and Innovation is to create and implement novel methodologies for the generation of immune cells specifically engineered to target cancer. Central to our efforts is the identification of suitable tumor antigens, which are the targets that the engineered immune cells will recognize and become activated by, subsequently eliminating tumor cells. While several cell therapies are currently under investigation for known and validated tumor antigens (see below), the heterogeneity of antigen expression between cancers, potential for unique antigen expression patterns in advanced disease, current lack of targetable tumor antigens for many cancers, etc. make it imperative to comprehensively identify tumor antigen landscapes

We propose to broaden our existing antigen discovery and validation programs to identify novel tumor antigens that can be safely targeted by cell-based therapy. Equally important, it is crucial for the platform to discern and exclude those antigens that have the potential to lead to off-target toxicity, thereby safeguarding the well-being of patients by preventing damage to healthy tissues. Current projects under investigation include: 1. CAR NK Platform, 2. Dual CAR (IL13Ra/EGFRv3-IL-21) NK cells for Glioblastoma, 3. TCR Platform, 4. Pluriceptor Platform, 5. CRISPR Platform. We have successfully activated over 18 clinical trials and anticipate activating another 4-5 by end of year 2024.

(3) (b) Major Accomplishments Expected During the Next 2 Years:

506 The University of Texas M.D. Anderson Cancer Center

Multi-center Studies. We will advance promising cell therapies from early phase studies to multi-center studies, with the intention of gaining FDA approval. Going beyond early phase trials to multicenter studies will ensure cell therapies are accessible and affordable to local and non-local patients.

Expanding Repertoire of Engineered Targeting Cells. We will direct efforts towards iPSCs and other immune cells (such as T and B cells and macrophages?) to diversify our therapeutic strategies. Diversifying the cell therapy portfolio beyond cord blood derived NK cells to include T cells, macrophages and other myeloid cells, will ideally generate an unlimited supply of starting cell populations.

Collaboration. Extending our existing collaborations, we will also establish external collaborations with MD Anderson network partners to enhance our research capabilities.

Autoimmunity. Exploring cell therapy applications in autoimmune diseases in addition to our core cancer focus. Generate and build our own master cell bank of iPSCs derived from 'optimal cords' that can be used to manufacture different cell therapy products.

Prioritizing Recruitment. To bolster our research initiatives, recruitment will become a priority.

Mentoring and Education to train the next generation of researchers.

(4) Funding Source Prior to Receiving Non-Formula Support Funding:

Philanthropic/Donors/Grants/Institutional Funds

(5) Formula Funding:

This item does not generate formula funding

(6) Category:

Research Support

(7) Transitional Funding:

N

(8) Non-General Revenue Sources of Funding:

philanthropic/donors/institutional funds

(9) Impact of Not Funding:

Failing to fund this request could lead to delays in clinical trials, which would ultimately affect the delivery of crucial therapies to patients who need them most. Additionally, it's important to recognize that donor funds are often earmarked for specific targets, which can restrict access to certain patient populations. As a result, this limitation adversely impacts the availability of therapies across multiple cancer types.

(10) Non-Formula Support Needed on Permanent Basis/Discontinuu

One time funding

(11) Non-Formula Support Associated with Time Frame:

N/A

506 The University of Texas M.D. Anderson Cancer Center

(12) Benchmarks:

By scaling production, we have the potential to drive the cost of NK cell therapy down from a current average cost of \$250,000 per dose to as little as one-tenth that cost. MD Anderson has established the best-in-practice manufacturing process for off-the-shelf NK cell therapy that is accomplished in 15 days. This much quicker process relative to our competitors also allows for scaling, so we can reach populations of patients who otherwise would not have been able benefit from this treatment.

(13) Performance Reviews:

The Executive Advisory Board (EAB) will be fully established during the start-up phase. The EAB will meet annually and provide oversight, guidance, approve direction and monitor progress. Membership of the EAB will be drawn from experts in the field of cell therapy, immunotherapy, cell engineering, and translational research who have made significant contributions to advancing the field and are committed to furthering the Institute's mission .

The Internal Advisory Council (IAC) will be fully established and active during the startup phase. The IAC will meet twice a year and will provide guidance and scientific input on the projects supported by the Institute. Additionally, IAC will review and provide recommendations on achievability and impact of new proposals submitted to the Institute, which is a critical component in guiding and prioritizing the Institutes research and scientific portfolio.

The Pipeline Review Committee (PRC) will be fully established and active during the startup phase. The PRC will meet quarterly and will ensure that R&D projects align with the Institute's overall goals, mission and strategic objectives. Additionally, PRC will help prioritize projects based on potential, impact and clinical advancements.

506 The University of Texas M.D. Anderson Cancer Center

Cord Blood & Cellular Therapy Research Program

(1) Year Non-Formula Support Item First Funded:	2002
Year Non-Formula Support Item Established:	2002
Original Appropriation:	\$2,000,000

(2) Mission:

Funding currently supports the Cord Blood Bank and Good Manufacturing Laboratory (GMP) with the development and management of critical research protocols for cord blood transplantation and other cellular therapies, including rapid and exciting developments of chimeric antigen receptor (CAR) T cell therapy and CAR natural killer (NK) cell treatments for hematologic and solid tumors. These novel therapeutic approaches harness the body's own immune system to effectively fight cancers by killing abnormal cells. Cord blood provides a source of stem cells for transplant for minority patients who often have no registered donors. MD Anderson serves an unmet need as 75% of the cord blood units in the bank are of Hispanic, Black or Asian origin and the institution finds units for patients that otherwise would not have donors.

(3) (a) Major Accomplishments to Date:

More than 430,000 cord blood units have been banked from five Houston Hospitals, and 2,963 of those units have been transplanted into patients with no other therapeutic options. This has allowed the team to pioneer the use of novel cord blood-derived cells for cancer treatment. Katy Rezvani MD PhD has developed cord blood natural killer cells genetically manipulated to express a chimeric antigen receptor (CAR) targeting CD19+ tumors. These NK-CAR cells produce impressive responses in leukemia (CLL) and lymphoma patients with no toxicity and an overall response rate of 87%. These results will likely change the standard of care for patients with otherwise fatal cancers, Elizabeth Shpall MD has developed strategies to expand cord blood hematopoietic cells in the laboratory to make the doses higher and thus the recovery faster when transplanted into patients and developed a strategy called fucosylation to enhance the homing of cord blood to the bone marrow. Both have demonstrated more rapid recovery, making the transplants safer from infections and bleeding. The team is now combining expansion and fucosylation to try to make recovery in cord blood patients even faster and developing cord blood tissue-derived mesenchymal stromal cells (MSCs) which can be life-saving when used to treat graft versus host disease (GVHD).

(3) (b) Major Accomplishments Expected During the Next 2 Years:

NK-CAR cells are being developed to target other cancers including acute myelogenous leukemia (AML), T cell leukemia and several solid tumors such as brain lung, pancreas and ovarian cancers. We are combining cord blood expansion and fucosylation to maximally enhance the recovery time of the cells when infused into patients which may allow us to do cord blood transplants as an outpatient. Cord blood tissue-derived MSCs and MSC-derived exosomes will be used for the eradication of GVHD, and to treat cancer patients who have developed cardiac injury from chemotherapy (anthracyclins) and cancer patients who have developed respiratory failure. Additionally, we are developing cord tissue MSCs, and MSC-derived exosomes as vehicles to deliver gene therapy to patients with otherwise fatal tumors such as glioblastoma and pancreatic cancer. We are developing an extremely novel approach to generate umbilical cord derived megakaryocytes (Megs) to make platelets which will address the global platelet shortages in Texas and the rest of the United States.

(4) Funding Source Prior to Receiving Non-Formula Support Funding:

Prior to the budget reductions for FY 2012 - 2013, the MD Anderson Cord Blood Bank received funding from the legislature through the Texas Health and Human Services Commission.

506 The University of Texas M.D. Anderson Cancer Center

(5) Formula Funding:

This item does not generate formula funding.

(6) Category:

Research Support

(7) Transitional Funding:

N

(8) Non-General Revenue Sources of Funding:

General Revenue support is instrumental in advancing the field of cord blood transplantation and these funds have been leveraged to generate around \$12 million external funding for the program for the biennium.

(9) Impact of Not Funding:

Inability to continue the cutting edge research which will allow us to treat cancer patients who have very few options. This includes those with refractory cancers for whom we are developing NK-CAR therapies. It also includes cancer patients with refractory Graft vs Host Disease (GVHD) which is often fatal without MSCs as well as cancer patients with chemotherapy induced heart and lung disease, all of whom may be cured with cord tissue derived MSCs.

(10) Non-Formula Support Needed on Permanent Basis/Discontinuu

Permanent Basis

(11) Non-Formula Support Associated with Time Frame:

N/A

(12) Benchmarks:

N/A

(13) Performance Reviews:

The MD Anderson Cord Blood Bank is accredited by the Foundation for the Accreditation of Cellular Therapy (FACT), accepted into the networks of the National Marrow Donor Program (NMDP) and Health Resources and Services Administration (HRSA) and has recently received their FDA Biological license (one of 8 cord banks in the world who have received this license) which moving forward will be required to release clinical cords for transplant in the United States.

506 The University of Texas M.D. Anderson Cancer Center

Inflammatory Breast Cancer (IBC) Research Program

(1) Year Non-Formula Support Item First Funded:	2008
Year Non-Formula Support Item Established:	2008
Original Appropriation:	\$2,000,000

(2) Mission:

The Breast Cancer Research Program strategy funds programmatic research for Inflammatory Breast Cancer (IBC), a rare and often lethal type of breast cancer, which represents 10% of breast cancer mortality. Our mission is to eliminate IBC from Texas, USA, and the world. We want Texas to continue to be recognized as the preeminent worldwide leader of fighting this rare but deadly disease.

Since it was established in 2007, the "Morgan Welch Inflammatory Breast Cancer (IBC) Research Program and Clinic" at MD Anderson Cancer Center continues to lead the way in diagnosis, treatment, translational research, collaboration, and community education for this aggressive disease.

(3) (a) Major Accomplishments to Date:

1. Increased annual intake from ~70-90 pts to ~120-140 pts in IBC multi-team and cross campus clinics as planned. Our specialists team meets each IBC patient together in rapid coordinated visits to provide IBC-specific trimodal care (chemotherapy/ targeted therapy/ immunotherapy, surgery, radiation therapy, and planning delayed reconstruction). 2. Expanded Collaborations - Partnered with Dana Farber Cancer Institute and Susan G. Komen. 3. Optimized Clinical Trial Portfolio to open two (2) new immunotherapy-based clinical trials, secured funding for a new trial to target metastatic triple negative IBC, and completed accrual and reporting on the unique IBC microbiome. 4. Expanded IBC Connect Network to 18 institutions including UT programs across Texas; 5. Expanded inter-institutional partnership for IBC Registry database. The clinical database and biorepository are the world's largest registry, now > 1000 patients, from which we presented outcome improvements and opportunities with most up to date therapies. 6. Generated new IBC biospecimen resources and obtained new grants to power pre-clinical research to collaborate and innovate newer mechanisms to cure IBC, and developed a program platform, IBC Metamorphosis, to support and advance focused initiatives to improve breakthroughs. 7. Continued our virtual IBC education seminar for physicians, advocates, and community of 175-200 members to discuss IBC care, collaborate, and innovate.

(3) (b) Major Accomplishments Expected During the Next 2 Years:

506 The University of Texas M.D. Anderson Cancer Center

1. Further expand IBC Multi-Team Clinic care across Texas- improved IBC local disease control and survival outcomes led to an annual volume increase to 150-175 patients.
2. Expansion of IBC Clinical Research - We anticipate two (2) new IBC protocols (in development) in 2024, to be activated in 6-12 months and will complete accrual of the multicenter study with potential to revolutionize treatment of HER2+ (low and amplified) IBC by 2026.
3. Advanced pre-clinical breakthroughs. We anticipate announcing breakthroughs in the unique biology of IBC and the role of blood-based biopsies in IBC in the next two years and to advance our understanding of the heterogeneity of IBC through our new collaboration with BostonGene.
4. Expansion of IBC Research Collaborations- expand neoadjuvant study in collaboration with Dana Farber Cancer Center (DFCI).
5. Create data alignment and resource-sharing opportunities to advance IBC team-science collaborations, co-develop protocols, and innovate newer modalities of care.
6. Continued improvement of community outreach efforts and patient and physician education regarding IBC.
7. Continued development of roadmap to connect IBC expertise throughout the MDA and UT System across the State of Texas to enhance trial access and accelerate discovery to reduce the number of patients who suffer with IBC in Texas as a primary goal and further beyond to outside of Texas.

(9) Impact of Not Funding:

506 The University of Texas M.D. Anderson Cancer Center

The consequence of not providing program funding would strongly impact all patients affected by IBC, the general public, state employees, and IBC Connect collaborators across fourteen (14) institutional sites. Additionally, in the absence of State funding, we would not be able to support the infrastructure to continue to educate and engage with institutional teams across multiple locations and the IBC community.

IBC has a median overall survival of only 4.75 years compared to 13.4 years for non-IBC patients. The median age of patients diagnosed with IBC is 5.25 years younger than that of non-IBC patients. Clinically, the program currently has ten (10) ongoing clinical trials with as many as 215 patients. These clinical studies are supported by an additional twenty-eight (28) laboratory studies with 869 patients and four (4) trials under development. If funding were discontinued, these critical patient-based studies would be detrimentally affected because there would not be infrastructure to support the studies. Further, we would fail to capitalize on our strategic positioning through diligent networking and relationship building across our regional and broader Texas network, missing the opportunity to impact IBC patients dramatically. These negative impacts will increase IBC-related mortality in Texas and the USA.

(10) Non-Formula Support Needed on Permanent Basis/Discontinuu

Permanent Basis

(11) Non-Formula Support Associated with Time Frame:

N/A

(12) Benchmarks:

N/A

(13) Performance Reviews:

1. Maintain and expand (goal 160/year) the IBC-specific clinic that is the largest in the world.
 2. Maintain the IBC Registry database of cases, and compare local/regional control rates, survival outcomes, and quality of life outcomes over time.
 3. Generate advanced IBC data and resources available for team science to develop cutting edge IBC research trials and therapies.
 4. Expand IBC partnerships with institutions, focusing on the UT system and local organizations, to expand and strengthen clinical and research collaborations across Texas.
 5. Expand partner site collaborations to increase available data in the IBC registry and patients enrolled at partner sites across Texas and beyond.
 6. Develop the first-ever IBC-specific PROs and gather data on quality-of-life outcomes that will improve over the next two years.
 7. We plan to publish at least four clinically oriented papers based on ongoing clinical trials that will inform current practice within two years.
 8. We expect to publish two paradigm shifting papers that will lead to novel diagnostics and treatments for patients with IBC within next two years.
 9. Enroll > 30 IBC cases per year on protocols to identify better treatments, including a national trial to assess the microbiome in IBC patients for the first time.
 10. Train a minimum of two trainees per year, developing clinical or research expertise to contribute to the future of this disease.

Institutional Enhancement

(1) Year Non-Formula Support Item First Funded: 2000
Year Non-Formula Support Item Established: 2000
Original Appropriation: \$1,000,000

(2) Mission:

Funding in the Institutional Enhancement strategy only includes funding from the Texas Collegiate License plate trust funds.

(3) (a) Major Accomplishments to Date:

Texas Collegiate License Plate scholarships for MD Anderson School of Health Professions students.

(3) (b) Major Accomplishments Expected During the Next 2 Years:

Texas Collegiate License Plate scholarships for MD Anderson School of Health Professions students.

(4) Funding Source Prior to Receiving Non-Formula Support Funding:

None

(5) Formula Funding:

This item does not generate formula funding

(6) Category:

Institutional Enhancement

(7) Transitional Funding:

N

(8) Non-General Revenue Sources of Funding:

Texas Collegiate License Plate Trust Fund

(9) Impact of Not Funding:

Will impact scholarships for MD Anderson School of Health Profession students.

(10) Non-Formula Support Needed on Permanent Basis/Discontinuation:

Permanent basis
