

ClioVis allows researchers or students to better understand change over time by combining the best features of timelines, mindmapping, and network visualization tools. Users can collaborate on history projects, better organize and visualize their research materials, and easily export and present their findings.

Help your students see history

CONNECT

Understand historical **connections** at play across different time periods or eras.

CITE

Cite sources to justify connections and to record source material.

COLLABORATE

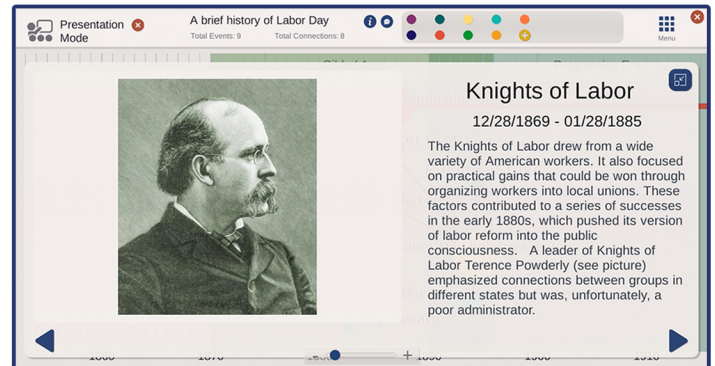

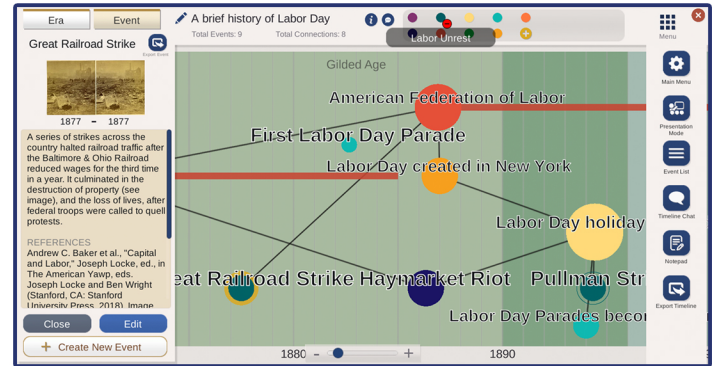

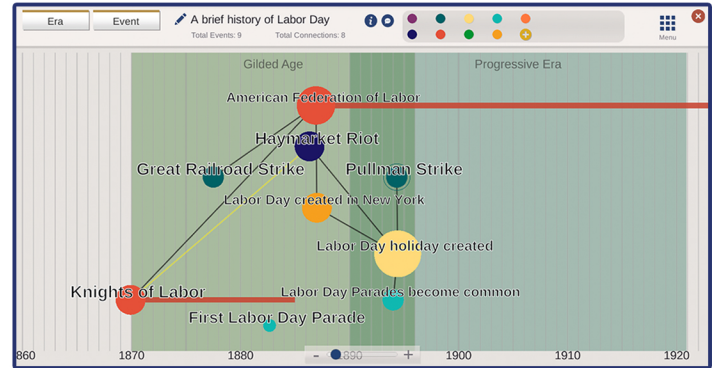

Work together in groups and chat within the application to **collaborate** and learn.

CATEGORIZE

Categorize events and make those categories visible with color-coding and sizing.

PRESENT

Easily **present** within the application without the need for external presentation tools

Testimonials

“This is a great tool to understand the larger context of history.”

“My overall impression of ClioVis is that it is an extremely valuable tool - especially for a course such as history which charts change over time. I would certainly use it again.”

“I like how it orders the events for you, which really simplifies the amount of effort it takes to make a timeline. It was also cool how organized the system was - it was easy to categorize events and to link events to one another.”

Why ClioVis?

ClioVis enables students to actively make connections between events. By making connections in their timelines, they learn the craft of history, explain how and why events are related, and enhance their analytical thinking skills.
